# Knocking at the College Door

## Projections of High School Graduates by State, Income, and Race/Ethnicity

The graduating class of 2008-09 is projected to be the largest in history, with some 3.2 million students. Those graduates are part of the early wave of the “baby boomlet,” children born between 1990 and 2000. During that decade, the nation’s population grew by 13.2 percent. But the number of births over that period (and the number of graduates years later) varies widely from region to region. The West saw the largest population growth among the four regions of the country, with a 19.7 percent increase in the population compared to 5.5 percent in the Northeast, 7.9 percent in the Midwest, and 17.3 percent in the South. The growth rates are now being reflected in the numbers of high school graduates. Nationally, the number of public high school graduates is projected to increase by 10.4 percent between 2001-02 and 2017-18. The growth will be unevenly distributed across the country’s four major regions, with the South looking at an 18.7 percent increase, and increases of 15.8 percent in the West, 2.7 percent in the Midwest, and .1 percent in the Northeast. Oregon’s population increased by 20.4 percent – from 2,842,321 to 3,421,399 – but the state is not projected to see that level of increase in public high school graduates between 2001-02 and 2017-18 (see Figure 1).

Figure 2. Projected Percent Change in Number of Public High School Graduates Between 2001-02 and 2017-18

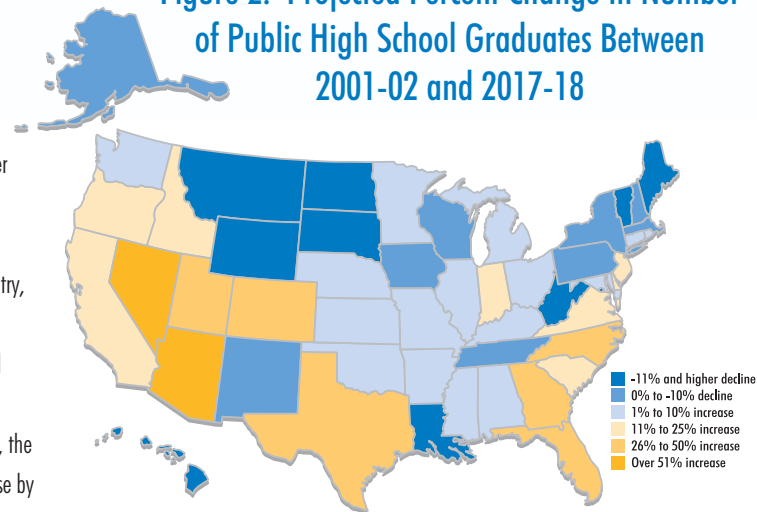

Figure 2. Oregon Public High School Graduates

1987-88 to 2001-02 (actual), 2002-03 to 2017-18 (projected)

Oregon was among the moderate-growth states in the nation between 1990 and 2000, significantly surpassing the national population growth rate during that decade. Following a short period of decline in the number of public high school graduates in Oregon from 1987-88 through 1990-91, modest growth characterized most of the years to 2001-02 (see Figure 2). Fluctuating annual increases ranging from less than 1 to nearly 7 percent occurred during those years leading to 2001-02. By the end of the 14-year period between 1987-88 and 2001-02, Oregon had gone from 28,058 public high school graduates to 31,155. The magnitude of annual changes will be smaller between 2002-03 and 2017, interspersed with a few years of stability or decline in the number of public high school graduates. The number of public high school graduates is expected to increase to 34,448 in 2017-18, a 10.6 percent change over 2001-02. Nonpublic high school graduates accounted for 5 percent of all Oregon high

school graduates in 1987-88; by 2001-02, that share had increased to 8.4 percent, or 2,871 nonpublic graduates. The number of graduates is expected to decrease through 2017-18 to approximately 2,200; their share is projected to decline somewhat.

A slightly larger share of Oregon’s public high school graduates will fall in the lower income categories in the near future. Although the state is projected to have a smaller portion of its public high school graduates in the lowest income category of \$0 to \$20,000 in 2006-07 than it did in 2000-01, Oregonians may see about 400 more students at this level. The largest numerical increase is expected in the \$20,001 to \$50,000 category, with about 850 additional graduates in 2006-07. The overall estimated change in family income for Oregon will be evident in the gradual shift in the proportion of graduates in each income category, as the two higher income categories are forecast to account for a smaller share of the public high school graduates, although the state is expected to see nearly 750 more graduates in the \$50,001 to \$100,000 category and an estimated additional 250 in the top income category. How will Oregon’s student population stack up when compared to the nation’s and the West’s? In the Western region in 2006-07, 17.2 percent of public high school graduates are projected to fall in the \$0 to \$20,000 category. The \$20,001 to \$50,000 category and the \$50,001 to \$100,000 category are expected to have 33.8 percent and 33.5 percent, respectively, with the \$100,001 and above category containing the remaining 15.5 percent of public graduates. Nationally that year, 16.3 percent of public high school graduates are expected to be in the lowest median family income category. Another 33.4 percent is estimated to fall in the \$20,001 to \$50,000 category. The \$50,001 to \$100,000 category is expected to account for 35.1 percent of public high school graduates in 2006-07, and the remaining 15.2 percent are projected in the category of \$100,001 and over. Figure 3 shows the projected distribution of public high school graduates across the four income groups in 2012-13 for Oregon and the nation.

**Figure 3. Public High School Graduates by Median Family Income 2012-13 (projected)**

**Figure 4. Oregon Public High School Graduates by Race/Ethnicity**

1988-89 through 2001-02 (actual), 2002-03 through 2017-18 (projected)

Oregon will see a significant shift in the racial/ethnic make-up of its public high school graduates over the next decade. During the late 1980s, underrepresented racial/ethnic groups accounted for approximately 9 percent of all public high school graduates in Oregon. That proportion gradually increased to 14 percent by 2001-02 and is projected to continue increasing at a higher rate during the projection period, reaching approximately 30 percent by 2013-14. Among these minority groups, Asians/Pacific Islanders made up the largest share until the mid-1990s, with 815 (3 percent of all graduates) in the class of 1989 and 1,283 in 2002. By 2013-14 that number is expected to reach over 2,300 and represent 7 percent of the class. The second largest group has been Hispanics; this group has seen the largest numerical and proportional growth. In the 1989 graduating class, there were over 700 Hispanics, who accounted for 2.7 percent of the class; their representation increased to nearly 2,000, or 6.4 percent, in 2001-02 and is projected to triple by 2013-14. The proportion of each graduating class that was Black, non-Hispanic was stable between 1988-89 and 2001-02 at nearly 2 percent. The number of Black, non-Hispanics is forecast to reach nearly 800 in the class of 2014, while still representing about 2 percent of the graduating class. White, non-Hispanic students were 91 percent of the graduating class of 1989; that proportion had declined to about 85 percent over a decade later and is projected to be approximately 67 percent for the class of 2014.
